Our organization Treewalk has proudly participated in a program conducted by Department of Botany, Mar Ivanios College, for identifying and preserving special trees as part of our campus rounds. We had found this campus to be green and beautiful and also keen in conserving its diversity passionately. With its rare trees like *Castanospermum australe*, *Ravenalla madagaskerensis* and common trees within the range of 55 to 60 species, campus is rich in its Biodiversity. We thank the authorities, staff and students for preserving the natural heritage of the campus.

Thanks for being part of conserving our natural heritage.
